

## The World's Most Advanced and Evolving Vulnerability Assessment Software

### Product Overview

CyberZeus Vulnerability Assessment product is most advanced vulnerability, configuration, and compliance assessment product. It features high-speed discovery, configuration auditing, asset profiling, sensitive data discovery, patch management integration, and vulnerability analysis. With a continuously-updated library of more than 20,000 vulnerability and configuration checks (plugins) and the support of CyberZeus expert vulnerability research team.

CyberZeus Vulnerability Assessment is trusted by more professionals than any other Vulnerability Assessment Compliance product.

Targeted email notifications provide an overview of the scan results, remediation recommendations, and suggestions to improve future scans

### VA™ Features:

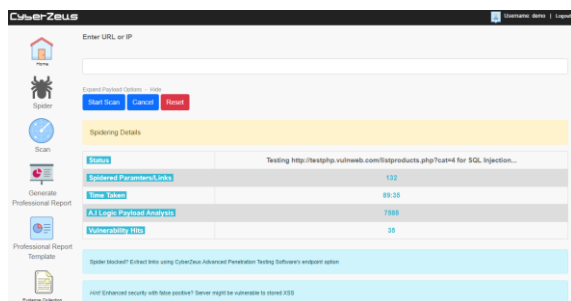

- Accurate, high-speed asset discovery
- Compliance auditing: FFIEC, FISMA, CyberScope Reporting Protocol, GLBA, HIPAA/HITECH, NERC, PCI, SCAP, SOX
- Configuration auditing: CERT, CIS, COBIT/ITIL, DISA STIGs, FDCC, IBM iSeries, ISO, NIST, NSA
- Control systems auditing: SCADA systems, devices, and applications
- Sensitive content auditing: PII (credit card numbers, SSNs) and intellectual property
- Vulnerability scanning for:
  - Network devices with Web Server
  - Virtual hosts: VMware ESX, ESXi, vSphere, vCenter
  - Operating systems with Web Server such as Windows, Mac, Linux, Solaris, BSD, Cisco iOS, IBM iSeries – Databases: Oracle, SQL Server, MySQL, DB2, Informix/DRDA, PostgreSQL
  - Web applications: Web servers, Web services, OWASP vulnerabilities
- Credentialed scanning detects local vulnerabilities and conditions
- Uncredentialed network-based scanning finds new hosts and vulnerabilities

### Key Benefits

- Easy customization for your organization
  - Flexible deployment, scanning, and reporting
  - Targeted email notifications of scan results and remediation recommendations
  - Vulnerability modifications
- Rapid, comprehensive security assessment
  - Identify patch using patch management systems, or among deployed patch managers
  - Consolidated list of patches to apply to become fully patched
- Lower your cyber risks, vulnerabilities, and compliance/audit citation risks
  - Automatic post-scan analysis with attachments stored in scan reports
- Low total cost of ownership (TCO)
  - Scan unlimited number of IPs, as often as you like
  - One-time subscriptions include software updates, access to compliance and audit files, and support
  - Automatic plugin updates
- Anytime, anywhere access from any Cellphone, Tablet and Computer in the world

## Deployment and Management

- Flexible deployment: Software application, hardware and virtual appliances, or software as a service
- Browser-based setup
  - Five criticality levels: Critical Risk, High Risk, Medium Risk, Low Risk and Informational

CyberZeus provides convenient access to scan details to assist with vulnerability investigations.

## Reporting and Monitoring

- Flexible reporting: Customize reports to sort by vulnerability or host, create an Executive Summary, or compare scan reports to highlight changes
- Targeted email notifications of scan results, remediation recommendations, and scan improvements. It saves time and money because of latest and state of the art scanning will mitigate risk of data breach in any organization, preventing loss of data and customer's privacy

## CyberZeus VA Deployment Options

**VA:** Software-based CyberZeus Vulnerability Assessment which is licensed per installation

**Service:** Manual Installation or Automatic unattended installation, server cloning and new approach is possible, in less than few minutes, your software will be up and running

**Installing:** After Software-as-a-service installation, free plugin updates, audit policies and support

## CyberZeus Auditor Bundles

Training and certification are available for those who are new to using VA and want the knowledge and skills to maximize every benefit of the VA™. CyberZeus has assembled several Auditor Bundles which combine subscriptions for On Demand Training and a Certification Exam at a significant cost savings over purchasing these items separately

## Complementary CyberZeus Products

Organizations can extend the capabilities with complementary products from CyberZeus Corporation, Inc.

- **CyberZeus Vulnerability Assessment (VA™):** Search for unknown vulnerabilities and new. Analyzes web servers and compliance violations.
- **CyberZeus Penetration Testing (PT™):** Aids in finding new vulnerability and compliance violations with a single console managing distributed scans.

## The CyberZeus VA™ Advantage

There are many vulnerability scanners on the market, but millions choose VA™ because it offers:

- Highly-accurate scanning with low false positives
- Comprehensive scanning capabilities and features
- Scalable to hundreds-of-thousands of systems
- Easy deployment and maintenance
- Low cost to administer and operate
